

Broome County area, New York

County labour-market refresh · prepared by Kcalbin LLC · as of **2026-10-20** · state NY

What this is. A dated exhibit of county labour-market data, laid out to support the labour-market analysis section of a local plan. **What this is not.** It does not satisfy any agency's requirement, it is not legal or regulatory advice, and your agency's own guidance governs what must be filed. Kcalbin supplies the data; the board writes the plan.

1. County displacement signals

county_name	risk_level	disruption_score	predicted_delta_3mo	predicted_delta_6mo	high_seasonal_variation	period
Broome County	LOW	33.89	-0.17	0.49	False	2026-08-01

Score is a **relative ranking of counties**, not a forecast with a hit rate. The source table also carries a `score_percentile` column which is **identical to the score in every row we checked**, so it is left out of this table rather than shown as a second measure; it is still in the CSV. A percentile compares this county with others in the same period. A "high seasonal variation" flag means normal seasonal swings can move the tier, so read the direction with extra care.

2. WARN layoff filings in the area

company_name	county_name	affected_workers	notice_date	layoff_date	source_url
Masonite Corporation d/b/a Owens Corning Doors	Broome	46	2026-08-25	2026-11-23	https://public.tableau.com/views/WorkerAdjustmentRetrainingNotificationWARN/WARN.csv?:showVizHome=no
Federal Express Corporation (Multiple Regions)	Broome	31	2026-03-23	2026-08-03	https://public.tableau.com/views/WorkerAdjustmentRetrainingNotificationWARN/WARN.csv?:showVizHome=no

Each filing carries the source link above so a reviewer can check it at the state register. WARN notices are filed with state agencies, not the federal government.

3. Economic context

county_name	exposed_industry_employment	exposed_industries_declining_share	mortgage_90plus_state_level
Broome County	4671	0.2	1.11

Delinquency figures are **state level**, not county level, because the published series is state level. Employment and industry figures are county level.

4. Method

1. Counties in this area are selected by name against the state's county set.
2. Displacement signals, WARN filings and economic context are read from Kcalbin's county tables on the as-of date printed above. Nothing is recomputed for this pack.
3. Rows are filtered to the counties named for this area and are otherwise unmodified.
4. The CSV shipped alongside this PDF contains the same rows, so every number here is checkable.

5. Sources

- BLS QCEW (county x NAICS, quarterly)
- Census Building Permits Survey (county)
- NY Fed Household Debt & Credit — STATE level, 11 states + US; null where uncovered
- WARN filings: the state register link printed on each row.
- Displacement score and forecast: Kcalbin county model, described on <https://kcalbin.com/chandler-displacement-intelligence>.

6. Limits, stated plainly

- **County level only.** If your local area is not a whole county, or spans part of one, these rows do not split to match it.
- **Delinquency is state level.** It is included as context, not as a county measure.
- **The score is relative, not predictive.** We publish no accuracy figure for it in this pack.
- **An empty table means no rows, not an error.** We print the absence rather than hide it.
- **This pack is a snapshot.** It is correct as of the date above and is not updated after delivery.

7. Integrity

Content hash (SHA-256 of the CSV shipped with this pack): 2052c5ba5efbdd519d35c7f791a910ddc3a9ddbd3aa92a737152d760c0471476. Quote it if you need to show a reviewer that the exhibit has not changed.
